Neural network concepts

Convolutional Neural Network

- CONV and POOL layers output high-level features of input
- Fully connected layer uses these features for classifying input image
- Express output as **probability** of image belonging to a particular class

$$\text{softmax}(y_i) = \frac{e^{y_i}}{\sum_j e^{y_j}}$$

GENERATIVE MODEL

- Creates New Data (Not just Classify it!)
- Captures Complex Data Distribution
- Can generate unlimited variations
